

PLEASE READ CAREFULLY

National Fire Codes require a fire protection system be installed in the paint spray area. Please refer to NFPA-33 Chapter 7 for more information.

Standard Tools does not supply fire protection systems due to the wide variations of State and local codes. We recommend that you contact a licensed fire protection system provider in your area for this equipment. If you have any further questions or require additional assistance in procuring this equipment, please feel free to contact Standard Tools. You may also want to contact your local city or county government offices or the local fire marshal.
